

## **ARMORGUARD CLEANER INSTRUCTIONS**

ARMORGUARD CLEANER - Mix 1 lb of cleaner to 1 gallon of warm water to dilute, you can pre-mix the product in a bucket for easier dilution of powder. Then pour the mixed liquid into an airless hand pump sprayer (garden sprayer) Spray the product directly onto concrete or masonry substrate, fully saturate the areas. Then use a heavy bristled brush (deck brush) to brush the coating into the surface. This will ensure a good etch and cleaning. Let it sit for about 15-20 mins max and wash the surface clean with water, remove any excess water with a pump, shop vac or towels, etc. Coverage 1 mixed gallon will cover approx. 500 s.f, coverage may vary due to porosities of the substrate.
